

## Chapter Test B

### Chapter: Acid-Base Titration and pH

**PART I** In the space provided, write the letter of the term or phrase that best completes each statement or best answers each question.

- \_\_\_\_\_ 1. The pH scale generally ranges from
- 0 to 1.
  - 1 to 1.
  - 0 to 7.
  - 0 to 14.
- \_\_\_\_\_ 2. During the titration of HCl with NaOH, a very rapid change in pH occurs
- when the first addition of known solution is made.
  - when roughly equivalent amounts of  $\text{H}_3\text{O}^+$  ions and  $\text{OH}^-$  ions become present.
  - at several points.
  - at no point.
- \_\_\_\_\_ 3. A water solution is neutral if
- it contains no  $\text{H}_3\text{O}^+$  ions.
  - it contains no ionized water molecules.
  - it contains no  $\text{H}_3\text{O}^+$  ions or  $\text{OH}^-$  ions.
  - the concentrations of  $\text{H}_3\text{O}^+$  ions and  $\text{OH}^-$  ions are equal.
- \_\_\_\_\_ 4. The antilog of a number N is
- the inverse of N.
  - the square root of N.
  - 10 raised to the power of N.
  - N raised to the 10th power.
- \_\_\_\_\_ 5. Universal indicators
- are mixtures of several indicator solutions.
  - are pure substances.
  - have very brief color-change intervals.
  - work well only for acidic solutions.
- \_\_\_\_\_ 6. A useful pH range for an indicator in neutralizations involving strong acids and weak bases is
- 1.2 to 3.0.
  - 3.1 to 4.6.
  - 6.0 to 7.6.
  - 9.5 to 11.0.

**Chapter Test B, *continued***

---

- \_\_\_\_\_ 7. An acid-base titration determines the solution volumes that are
- chemically equivalent.
  - of equal molarity.
  - of equal mass.
  - of equal molality.
- \_\_\_\_\_ 8. In acidic solutions, an indicator that is a weak acid, HIn, is primarily in the form
- $\text{In}^+$ .
  - $\text{In}^-$ .
  - InOH.
  - HIn.

**PART II****Write the correct term (or terms) in the space provided.**

9. Pure water partially breaks down into ions in a process called \_\_\_\_\_.
10. If  $[\text{H}_3\text{O}^+]$  in a solution is less than  $[\text{OH}^-]$ , the solution is \_\_\_\_\_.
11. The pH range over which an indicator changes color is called the indicator's \_\_\_\_\_.
12. The negative of the common logarithm of the hydronium ion concentration is called \_\_\_\_\_.
13. The product of  $[\text{H}_3\text{O}^+]$  and  $[\text{OH}^-]$  in a water solution equals \_\_\_\_\_.
14. The sum of the pH and the pOH of a neutral solution at  $25^\circ\text{C}$  is \_\_\_\_\_.
15. As the concentration of hydronium ions increases, a solution becomes more acidic and the pH \_\_\_\_\_.
16. In a titration, an indicator changes color at the \_\_\_\_\_ of the titration.
17. When a weak acid is titrated with a strong base, the pH of the solution at the equivalence point is \_\_\_\_\_ than 7.

**Chapter Test B, *continued***

**18.** When a strong acid is titrated with a weak base, the pH of the solution at the equivalence point is \_\_\_\_\_ than 7.

**19.** A \_\_\_\_\_ is a highly purified solid used to check the concentration of a standard solution.

**20.** A 1 M solution of NaOH will have a pH that is \_\_\_\_\_ than the pH of a 1 M solution of  $\text{NH}_3$ .

**In the space provided, identify each of the following values as true of *acidic* or *basic* solutions at 25°C.**

**21.** \_\_\_\_\_ pH = 4.0

**22.** \_\_\_\_\_  $[\text{H}_3\text{O}^+] = 1 \times 10^{-2}$

**23.** \_\_\_\_\_  $[\text{OH}^-] = 1 \times 10^{-8}$

**24.** \_\_\_\_\_ pH = 9.0

**25.** \_\_\_\_\_  $[\text{OH}^-] = 1 \times 10^{-4}$

**PART III Write the answers to the following questions in the space provided.**

**26.** How does a pH meter measure the pH of a solution?

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**27.** What can be observed about the rate of change in the pH of a solution during a titration?

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**Chapter Test B, *continued***

---

- 28.** Write the general equilibrium expression for the dissociation of an acid-base indicator that is a weak acid,  $\text{HIn}$ , and explain how this equilibrium determines the color of the indicator at a given pH.

---

---

---

---

---

---

---

**PART IV**

In the space provided, identify each of the following substances as *acidic*, *basic*, or *neutral*.

- 29.** \_\_\_\_\_ grapefruit
- 30.** \_\_\_\_\_ pure water
- 31.** \_\_\_\_\_ seawater
- 32.** \_\_\_\_\_ eggs
- 33.** \_\_\_\_\_ blood

Calculate the  $[\text{H}_3\text{O}^+]$  and  $[\text{OH}^-]$  for each of the following. Write your answers in the spaces provided.

- 34.** \_\_\_\_\_  $1 \times 10^{-4} \text{ M HCl}$
- 35.** \_\_\_\_\_  $1 \times 10^{-4} \text{ M NaOH}$
- 36.** \_\_\_\_\_  $1 \times 10^{-4} \text{ M Ca(OH)}_2$
- 37.** \_\_\_\_\_  $1 \times 10^{-4} \text{ M HNO}_3$
- 38.** \_\_\_\_\_  $5 \times 10^{-3} \text{ M HClO}_4$

**Chapter Test B, *continued***

---

**PART V Write the answers to the following problems on the line to the left, and show your work in the space provided.**

\_\_\_\_\_ **39.** What is the hydronium ion concentration of an aqueous solution that has a pH of 5.0?

\_\_\_\_\_ **40.** What is the pH of a  $10^{-4}$  M HCl solution?

\_\_\_\_\_ **41.** What is the hydroxide ion concentration of a solution with a pH of 12.40?

\_\_\_\_\_ **42.** What is the molarity of a solution of  $\text{H}_2\text{SO}_4$  if 49.0 mL of it are neutralized by 68.4 mL of 0.333 M NaOH solution?

\_\_\_\_\_ **43.** If 72.1 mL of 0.543 M  $\text{H}_2\text{SO}_4$  are needed to neutralize 39.0 mL of KOH solution, what is the molarity of the KOH solution?

\_\_\_\_\_ **44.** What is the molarity of an NaOH solution if 130.0 mL of the solution are neutralized by 61.3 mL of 0.0124 M  $\text{H}_3\text{PO}_4$ ?

water to produce a sulfuric acid solution that falls to the ground as rain or snow.  $\text{SO}_3(g) + \text{H}_2\text{O}(l) \rightarrow \text{H}_2\text{SO}_4(aq)$

**37.** Have a sour taste; change the color of acid-base indicators; some react with active metals to release hydrogen gas; react with bases to produce salts and water; conduct electric current

| 23. c | 24. d |
| 25. d |       |

### TEST B

- |                         |      |
|-------------------------|------|
| 1. d                    | 2. b |
| 3. d                    | 4. c |
| 5. a                    | 6. b |
| 7. a                    | 8. d |
| 9. self-ionization      |      |
| 10. basic               |      |
| 11. transition interval |      |
| 12. pH                  |      |
| 13. $10^{-14}$          |      |
| 14. 14                  |      |
| 15. decreases           |      |
| 16. end point           |      |
| 17. higher              |      |
| 18. lower               |      |
| 19. primary standard    |      |
| 20. higher              |      |
| 21. acidic              |      |
| 22. acidic              |      |

- 23.** acidic  
**24.** basic  
**25.** basic  
**26.** A pH meter measures the pH of a solution by measuring the voltage between the two electrodes that are placed in the solution. This works because the voltage is proportional to the hydrogen ion concentration.  
**27.** The pH changes slowly at first, then rapidly through the equivalence point, then slowly again.  
**28.**  $\text{HIn} + \text{H}_2\text{O} \rightleftharpoons \text{H}_3\text{O}^+ + \text{In}^-$  or  $\text{HIn} \rightleftharpoons \text{H}^+ + \text{In}^-$   
 In acidic solutions, the  $\text{H}_3\text{O}^+$  ions in solution drive the equation toward the nonionized form. HIn is present in largely nonionized form in acidic solutions, and  $\text{In}^-$  ions are present in largely ionized form in basic solutions. HIn is a different color than the  $\text{In}^-$  ion.

- 29.** acidic  
**30.** neutral  
**31.** basic  
**32.** basic  
**33.** basic  
**34.**  $[\text{H}_3\text{O}^+] = 1 \times 10^{-4} \text{ M}$ ;  
 $[\text{OH}^-] = 1 \times 10^{-10} \text{ M}$   
**35.**  $[\text{H}_3\text{O}^+] = 1.0 \times 10^{-10} \text{ M}$ ;  
 $[\text{OH}^-] = 1.0 \times 10^{-4} \text{ M}$   
**36.**  $[\text{H}_3\text{O}^+] = 5.0 \times 10^{-11} \text{ M}$ ;  
 $[\text{OH}^-] = 2.0 \times 10^{-4} \text{ M}$   
**37.**  $[\text{H}_3\text{O}^+] = 1 \times 10^{-4} \text{ M}$ ;  
 $[\text{OH}^-] = 1 \times 10^{-10} \text{ M}$   
**38.**  $[\text{H}_3\text{O}^+] = 5 \times 10^{-3} \text{ M}$ ;  
 $[\text{OH}^-] = 2 \times 10^{-12} \text{ M}$   
**39.**  $1 \times 10^{-5} \text{ M}$   
**40.** 4.0  
**41.**  $2.5 \times 10^{-2} \text{ M}$   
**42.** 0.232 M  
**43.** 2.01 M  
**44.** 0.0175 M
